

JARVIS^{AI}

ENGINEERED IN SAUDI,USED GLOBALLY

AI portals · Intelligent agents · Connected operations

MOBILE APP

DESKTOP PORTAL

An operating layer built around your business

Jarvis is a Saudi AI engineering and automation agency. We build custom portals, AI agents, workflows and integrations that connect your departments, systems and data in one secure environment.

Not a fixed product — an engineering partner that designs around how your business already operates.

Built around your operation

01

Connected departments

Shared data and workflows across every team.

02

End-to-end delivery

One accountable team from assessment to launch.

03

Agents that execute

Real work completed under human oversight.

04

Saudi-market fit

Arabic-first and locally aligned.

05

Secure and scalable

Controlled access, architecture built to grow.

06

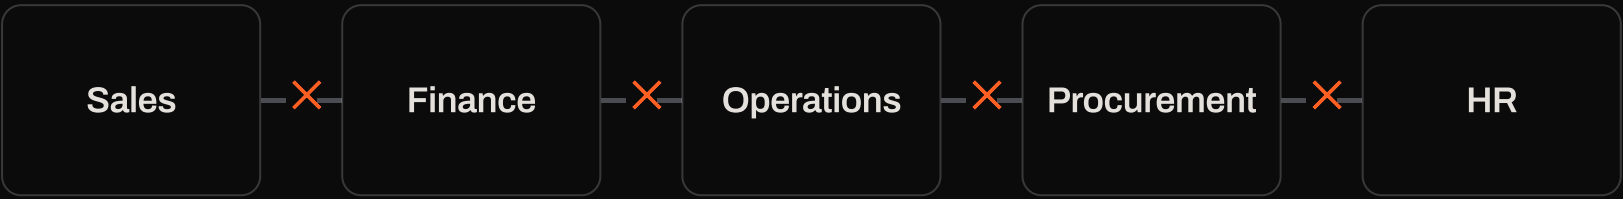

Continuous support

Monitored and improved after launch.

THE OPERATIONAL PROBLEM

Ambition isn't the problem. Disconnection is.

TODAY: FIVE TEAMS, NO SHARED THREAD

Five versions of the truth. None of them current.

01 Manual repetition

Teams re-enter the same data.

02 Department silos

Each team sees only its own part.

03 Disconnected systems

Tools cannot share data or trigger work.

04 Delayed reporting

Information arrives after the moment to act.

05 No live visibility

Risks and exceptions surface too late.

06 People dependency

Critical work lives in one person's head.

One layer connects every department

01 Executive Management

02 Sales

03 Marketing

04 Customer Service

05 Operations

06 Finance & Accounting

07 Human Resources

08 Procurement

09 Supply Chain & Logistics

10 IT & Digital Transformation

SHARED ACROSS THE LAYER

Shared data · Connected workflows · Live visibility · Role-based access

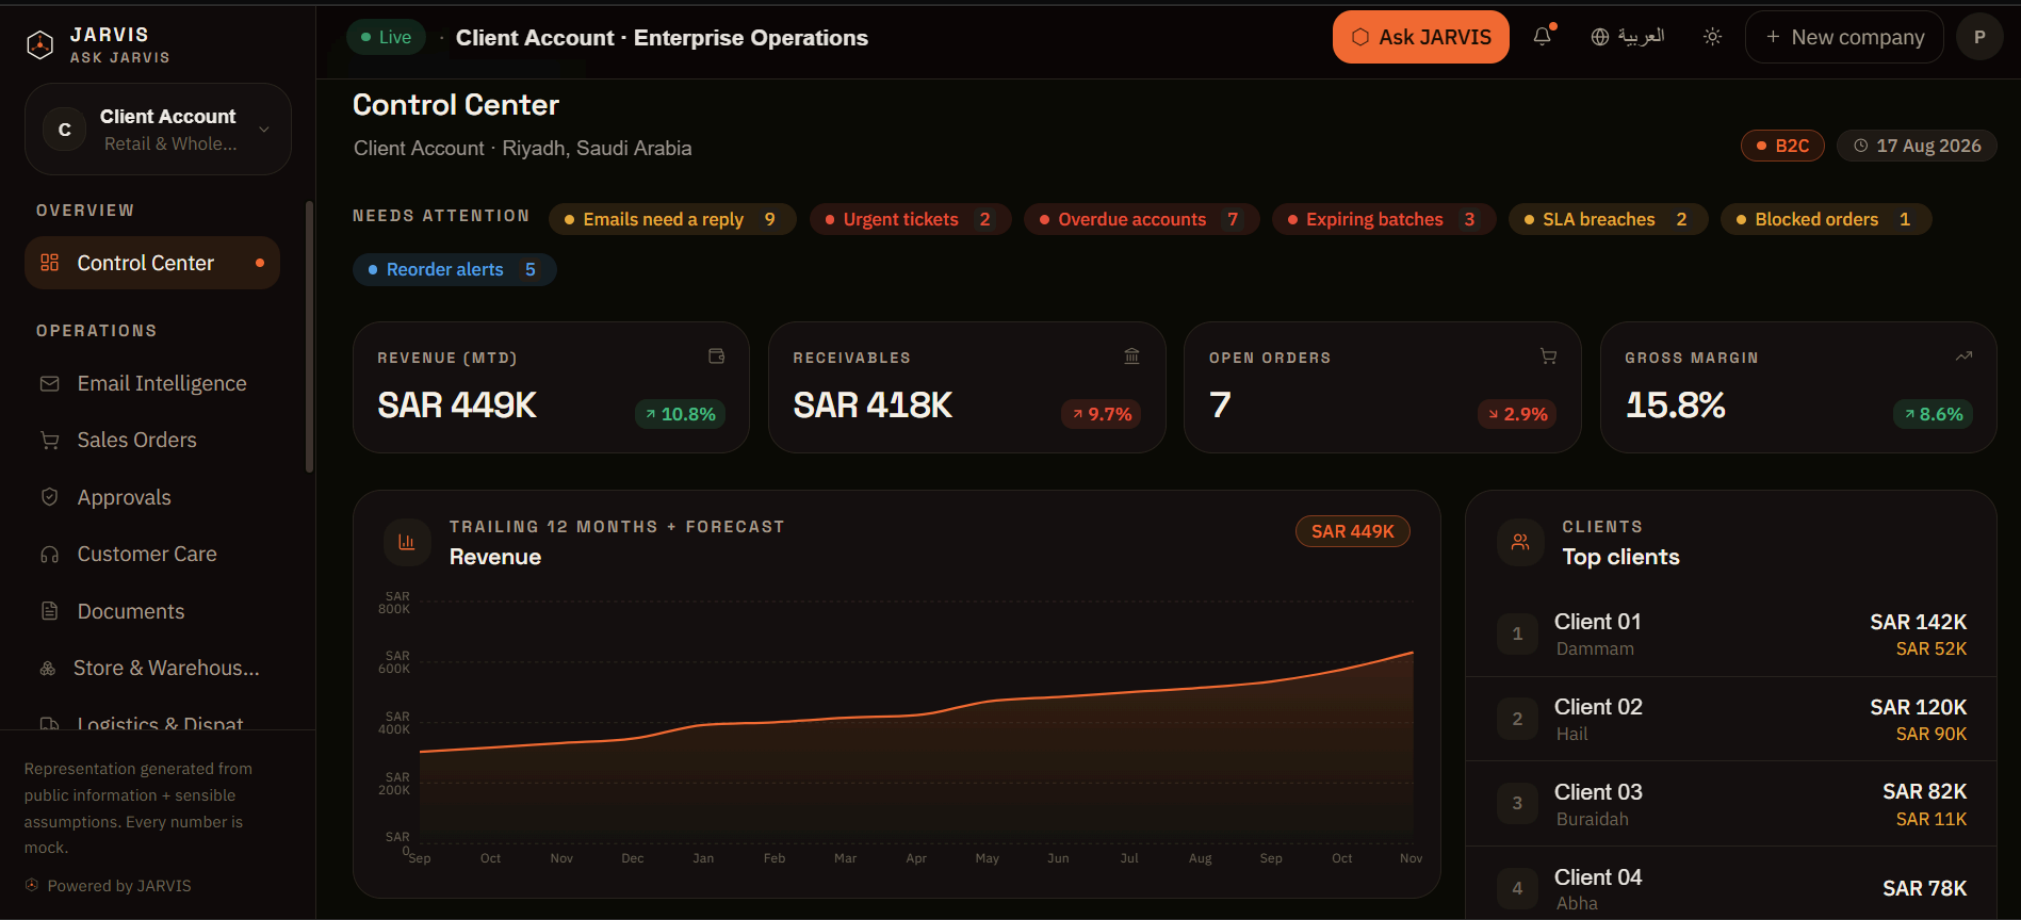

Ten departments on one operating structure

Decisions at the top, execution below, and a single Jarvis layer carrying all of it.

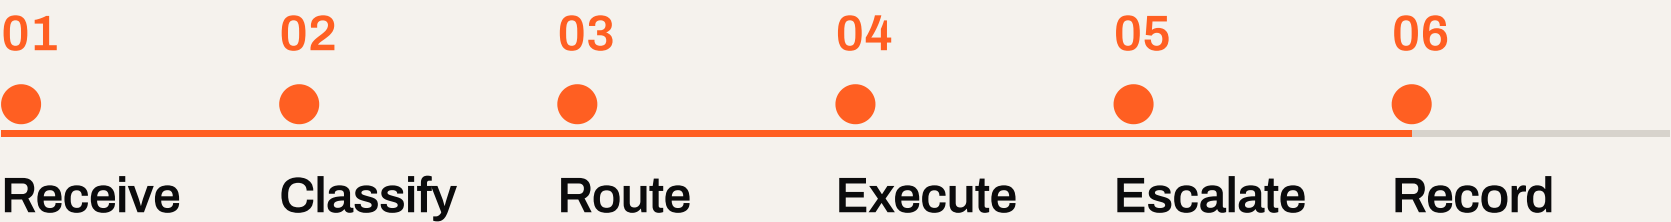

One portal for the entire operation

The live control centre every department works from.

Work that runs itself, under rules you set

- WHEN** an input arrives.
- IF** permissions, rules, priorities and thresholds are met.
- THEN** complete the task or trigger the next workflow.
- ELSE** escalate with full context.
- LOG** every action, decision and outcome.

■

**Agents execute.
People decide.**

Judgment, approval and exceptions stay with your team.

WHERE AGENTS WORK

Document and data intake · follow-ups and notifications · report generation · lead qualification · cross-department coordination

INTEGRATION WITHOUT DISRUPTION

Connect what you already run

Jarvis links your existing platforms so data moves once and stays consistent. Nothing is replaced without reason.

CORE SYSTEMS

ERP
CRM
Accounting

COMMERCE & DATA

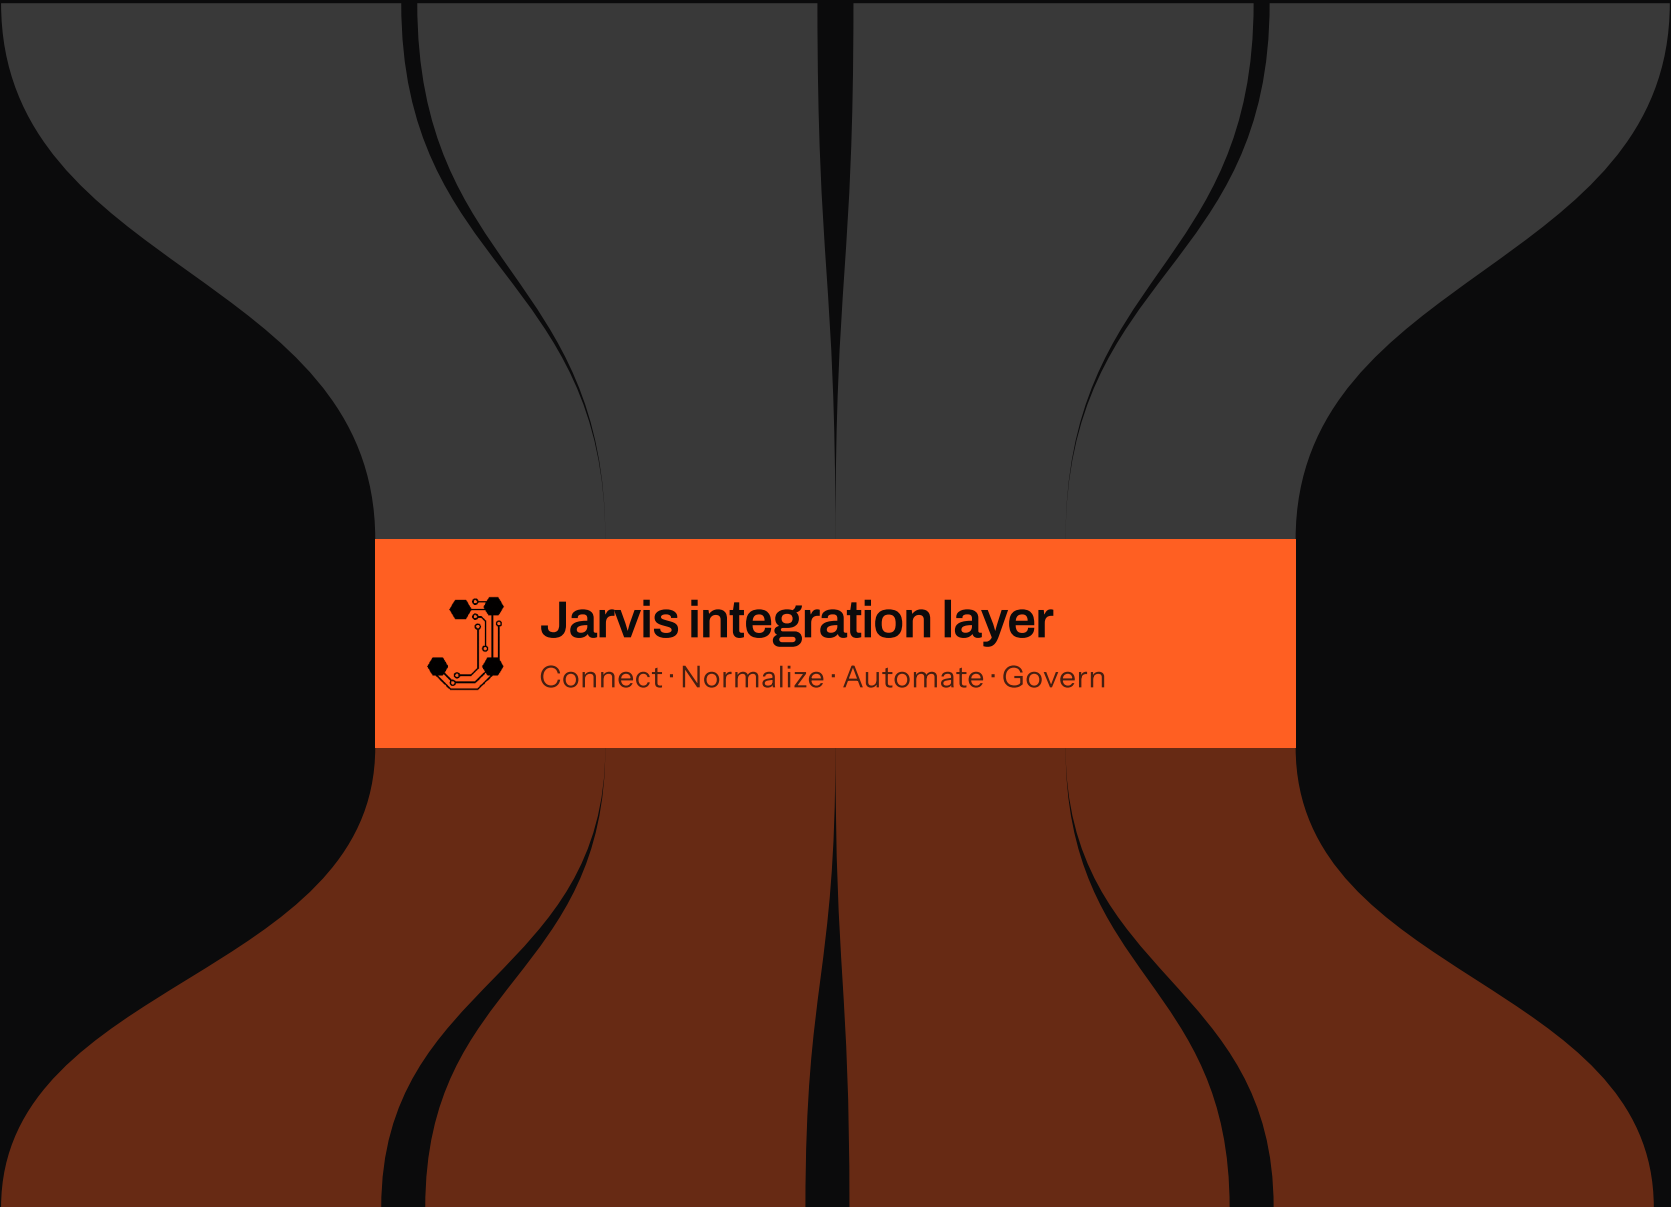

E-commerce
Databases

COMMUNICATION

Email
WhatsApp

EXTERNAL

Third-party APIs

Unified data flow

Duplicate entry removed

Consistent, report-ready records

Existing systems and licences preserved

HOW WE DELIVER

A delivery journey, not a handover

Every phase is validated before the next begins, and improvement continues after launch.

DISCOVER AND DIAGNOSE

01 Business assessment

Priorities, pressures and how you operate today.

02 Operational diagnosis

Mapping workflows and defining system gaps.

DESIGN AND BUILD

03 Solution architecture

Environment, integrations, permissions and workflows.

04 Development and integration

Building portals, agents, automations and connections.

VALIDATE AND IMPROVE

05 Testing and training

Validating workflows, permissions and team readiness.

06 Launch and ongoing support

Tracking performance and upgrading over time.

Jarvis with you at every step — and after launch

Book a meeting.

Tell us where work slows down. We'll map the opportunity and recommend the right next step.
